EDUCATION

Thapar institute of Engineering & Technology

Bachelor of Engineering, Computer Engineering (GPA: 9.14/10)

Patiala, Punjab, IN

Aug 2024 – Jun 2028

Amity International School, Sector 46

Class XII (Percentage: 94.2%)

Gurugram, Haryana, IN

Mar 2022 – Mar 2024

EXPERIENCE

Research & Development Intern

Samsung R&D Institute India

Jul 2026 – Present

Remote | Bengaluru, IN

- Collaborated in a 4-member team to design SmarTest, an AI-powered test-case generation and regression-analysis system for identifying test cases impacted by GitHub pull requests.
- Architected an end-to-end agentic pipeline orchestrating Flask, GitHub REST APIs/Webhooks, PostgreSQL, and GPT-4 via LangChain to analyze code changes and generate/update Gherkin test cases.
- Defined a human-in-the-loop validation workflow that combines deterministic code analysis and Gherkin validation with LLM-based test decisions, targeting more than 95% accuracy for existing test selection and 90% for new test generation.

Backend Developer Intern

Wyreflow Technologies

May 2026 – Jul 2026

Remote | Bengaluru, IN

- Developed and maintained 10+ backend APIs on Django REST Framework powering authentication, payments, and user management workflows for a production application serving real customers.
- Engineered and enhanced RESTful APIs for OTP-based authentication and payment processing while collaborating with cross-functional teams, improving reliability and reducing manual operational overhead.
- Diagnosed and resolved production issues, optimizing database queries and pagination to reduce API response times by 20-30%, and authored test suites for Django endpoints to support CI/CD pipeline reliability, improving production stability for live customer-facing workflows.

PROJECTS

Supp – Group Music Listening App | Python, Django, PostgreSQL | [GitHub](#) | [Live](#)

Jan 2026 – Mar 2026

- Designed and shipped a real-time collaborative music platform enabling shared listening rooms with synchronized playback across 375M+ SoundCloud tracks.
- Implemented SoundCloud OAuth 2.0 authentication and track search APIs, and developed a polling-based synchronization system that maintained playback consistency within 1-3 seconds across multiple users.
- Deployed to production and stress-tested with 20+ concurrent users, validating reliability under real usage conditions.

Leadify – Business Card Scanner | Python, Flask, PostgreSQL | [GitHub](#) | [Live](#)

Oct 2025 – Nov 2025

- Built a scalable lead capture system integrating Google Cloud Vision API, regex & Gemini for OCR and structured contact-data extraction, achieving 98% accuracy in extracting contact details from high-volume image uploads.
- Released to production and currently being used by 2 companies, having processed 5000+ cards.

SKILLS

Languages: C/C++, Python, HTML, CSS, JavaScript, SQL

Frameworks: Django, Flask

Tools & Libraries: Git, GitHub, Render, NumPy, Pandas, REST APIs, LangChain

Database: MySQL, PostgreSQL, Oracle

Relevant Coursework: Data Structures & Algorithms (DSA), DBMS, Object Oriented Programming (OOP), OS, CN

ACHIEVEMENTS

Merit Scholarship: Awarded tuition fee waiver for academic excellence, based on GPA merit at my university.

National Finalist: Spearheaded a team of 3 students to develop and pitch an AI-driven healthcare case study at the International Conference on AI for Social Impact (Ajman, UAE, 2025), advancing to the national finals.

Hackathons: Participated in 10+ hackathons, gaining experience in rapid prototyping under time constraints.
